1. In the summer of 1952 construction was begun on the oil refinery at location (Q.G. 439-090), near Cerrik and about eight kilometers southwest of Elbasan. By June 1953 two stories had been completed on about 10 buildings, each of which was about 80 by 60 meters.

25X1

25X1

The plan for the refinery calls for 30 or more buildings. The machinery for the refinery has already arrived from the Soviet Union.

2. A wall encircling an area of about one square kilometer is being constructed around the above buildings. Outside the wall other buildings will be constructed to house the workers.

3. The refinery will refine oil from the fields of Kucove. In June 1953 work was completed on an underground pipe line from Kucove to Cerrik. The pipes are of iron, about .25 meter in diameter, and were imported from the Soviet Union. The pipes were placed .25 meter to one meter below the surface of the earth, depending on the terrain. The pipeline follows the following route: Kucove (Q.M. 36-84); (Q.M. 360-870); (Q.M. 392-940); (Q.M. 420-960); (Q.G. 452-026); (Q.G. 442-067); (Q.G. 439-090). From (Q.G. 452-026) to (Q.G. 439-090) the pipeline is parallel to and about one kilometer from the Shtepan (Q.G. 48-02)-Bezlik (Q.G. 44-08) road.

4. About the middle of June 1953 work was discontinued on the refinery, and then was resumed at the beginning of August.

5. [redacted] about six or seven thousand prisoners and the construction services were working on the refinery and pipeline.
